

Orbitra Vault Product Guide

Plans, features, API and troubleshooting · Release 7.3 · April 2026

1. What is Orbitra Vault?

Orbitra Vault is a cloud platform for storing, sharing and collaborating on business documents. It combines encrypted storage, real-time co-editing, granular sharing permissions, full version history and an audit trail. Desktop sync clients are available for Windows 10 and later, macOS 13 and later, and Ubuntu 22.04 and later. Mobile apps are available for iOS and Android.

2. Plans and pricing

All prices are in US dollars and exclude applicable taxes. The Business plan costs USD 29 per user per month when billed annually, or USD 35 per user per month when billed monthly.

Feature	Starter	Team	Business	Enterprise
Price	Free	\$12 / user / month	\$29 / user / month (annual) or \$35 (monthly)	Custom quote
Users	Up to 3	Up to 50	Unlimited	Unlimited
Storage	5 GB total	1 TB pooled	5 TB pooled	Unlimited
Max file size	250 MB	15 GB	15 GB	50 GB
Version history	7 days	90 days	1 year	Unlimited
SSO (SAML / OIDC)	No	No	Yes	Yes
API access	No	60 requests / min	600 requests / min	Custom
Uptime SLA	None	99.5%	99.9%	99.95%

Enterprise customers can additionally choose a dedicated data region and use customer-managed encryption keys. A 14-day free trial of the Business plan is available and no credit card is required to start it.

2.1 Support levels

Plan	Channel	First response target
Starter	Community forum	Best effort
Team	Email	24 business hours
Business	Email and chat	4 hours
Enterprise	Email, chat, phone and named Customer Success Manager	1 hour for P1 issues

3. Key features

3.1 Sharing and permissions

Files and folders can be shared with four permission levels: Viewer, Commenter, Editor and Owner. Public links can be protected with a password and an expiry date; on the Business and Enterprise plans administrators can disable public links entirely for the whole workspace.

3.2 Trash and recovery

Deleted files remain in the Trash for 30 days, after which they are permanently removed. Workspace owners can restore any item from the Trash during this window. Items removed from the Trash cannot be recovered by the customer.

3.3 File locking

When a user opens a file in a desktop application through the sync client, Vault places a soft lock on it. Other users can still view the file, but saving changes returns error VLT-409 until the lock is released or expires after 2 hours of inactivity.

4. REST API

The Vault REST API lets customers automate uploads, permissions and reporting. The base URL is `https://api.vault.orbitra.example/v2` and all requests must use HTTPS. Authenticate by sending a personal access token or OAuth 2.0 access token in the header `Authorization: Bearer <token>`. Tokens are created in `Settings > Developer`.

Rate limits depend on the plan (see Section 2). Every response includes the headers `X-RateLimit-Limit` and `X-RateLimit-Remaining`. When the limit is exceeded the API returns HTTP 429 with a `Retry-After` header giving the number of seconds to wait. Clients should retry using exponential backoff.

List endpoints are paginated using cursors. Pass the `next_cursor` value from a response as the cursor query parameter to fetch the next page; the maximum page size is 200 items.

5. Error codes

Code	HTTP status	Meaning	What to do
VLT-401	401	Missing, expired or invalid token	Create a new token or refresh the OAuth token.
VLT-403	403	Insufficient permissions for this file or folder	Ask the owner for Editor or Owner access.
VLT-409	409	File is locked by another user	Wait for the lock to be released (auto-expires after 2 hours).
VLT-413	413	File exceeds the plan's maximum file size	Split the file or upgrade the plan.
VLT-429	429	Rate limit exceeded	Wait for <code>Retry-After</code> seconds, then retry with backoff.

Code	HTTP status	Meaning	What to do
VLT-507	507	Workspace storage quota exceeded	Delete files, empty the Trash, or buy more storage.

6. Troubleshooting the sync client

- If syncing appears stuck, run the command **vault doctor** from a terminal. It checks connectivity, disk space and clock drift and writes a report to the logs folder.
- Sync pauses automatically when free disk space falls below 2 GB.
- Files with names longer than 255 characters or containing the characters < > : " | ? * are skipped and listed in the sync issues panel.
- Logs are stored in ~/.orbitra/vault/logs on macOS and Linux, and in %APPDATA%\Orbitra\Vault\logs on Windows.
